

Themis for SAP

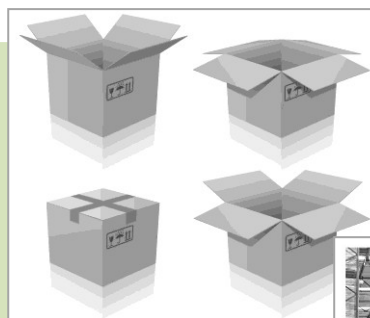

radio frequency warehousing solutions for SAP

SAP enhancement packs

Invenio enhancement packs are a range of pre-configured value added solutions that enable you to quickly automate a range of common processes within SAP. These packs are only available on the SAP platform and, if required, can be customised to your precise requirements in order to absolutely support the way that you do business.

In creating these enhancements, Invenio have drawn upon the experience and specialist knowledge of our entire team of SAP consultants. The result is the blueprint for a robust, stable and reliable configuration that adheres to SAP implementation best practice and is delivered using proven methodologies.

Radio Frequency Warehouse Management Solutions

Invenio can help you to achieve a more efficient warehouse operation by integrating your SAP solution with today's RF technologies. Themis for SAP enables you to eradicate lengthy data entry processes, improve inventory accuracy, reduce costs and prevent information delays that so often keep companies from achieving a streamlined, controlled and efficient warehousing operation.

RF Warehouse Automation

With Themis for SAP, Invenio can help you to ensure your supply chain is optimised and that your warehouse operatives are working efficiently and productively. Our consultants offer in-depth expertise in SAP best practice and will help you build, develop and configure Themis to fit your exact requirements.

Why invest in integrated RF?

- **Better data management.** You can automatically validate incoming transaction data which means you'll find that data entry routines are reduced by up to 90%, while data integrity and accuracy increases exponentially. This allows for accurate, real-time information that's available to you for timely and well informed supply chain decisions.
- **Improved inventory accuracy.** Themis for SAP enables improved operational discipline and real-time visibility across right across your inventory.
- **Increase warehouse productivity and efficiency.** You can curtail labour costs by improving your operatives' productivity through a substantial reduction in 'time per task'. For example, you can expect to see a measurable improvement in inventory location times via directed pick, put-away and stock location process.
- **Reduce operational expenses.** Themis for SAP helps you to achieve a paperless warehouse environment. This substantially reduces operational expenses and eliminates traditional warehouse paperwork such as picking slips and receiving logs, which are prone to errors and delays. What's more, with the advent of unprecedented inventory accuracy, you can be

Themis for SAP offers:

- better data management
- improved inventory accuracy
- increased efficiencies
- reduced operational expenditure
- improved productivity
- streamlined operational processes
- real time stock updates
- improved warehouse utilisation
- enhanced safety

Invenio is here to help you administer, support and develop your SAP solution so that you can get on with running your business efficiently and profitably. If you'd like to learn more about how we can help your business, please call our advisory team on +44 (0)330 440 1800.

confident that your warehouse space utilisation is optimised - allowing you to reduce the size of your warehouse and distribution centres - or even carry more product lines without having to increase floor space.

Voice Picking Solutions

With Invenio you can deploy cutting-edge voice technologies that allow workers to communicate verbally with your SAP Warehouse Management System. Themis Voice for SAP enables tasks to be generated by your SAP solution and translated into spoken commands that your operatives hear via a headset that's attached to a mobile device. Operatives' responses are translated back into data and are then sent to SAP via a wireless network in a real-time working environment.

Why invest in Themis Voice for SAP?

- **Improved accuracy.** Improvements in order picking accuracy are significant – with an accuracy of some 99.9% (one error per thousand picks) or greater often achieved.
- **Increased productivity.** Order picking productivity often improves by 10% to 20% simply because the hands-free operation speeds up picking - and trips back to the assignment desk are eliminated.
- **Reduced administration overheads.** Paperless picking means that the work of printing and distributing picking lists or labels is eliminated (as is the task of keying in picking confirmations, amendments and catchweights).
- **Real time stock updates.** By enabling real time communication you can effect real time stock updating. This in turn allows you to trigger letdowns to replenish picking-faces, optimise the use of fork lift trucks and prevent re-picks and/or waiting time due to empty picking faces.
- **Streamlined warehouse management processes.** Cycle counting can be built into the letdown task, thereby improving the efficiency of the stock checking process. The improved accuracy of stock recording leads to improved service levels, less time spent investigating stock discrepancies and better overall management of the warehouse.
- **Increased operative safety.** Hands free and eyes free operation leads to fewer accidents. Eliminating paper also leads to less waste paper, resulting in a cleaner, tidier and safer warehouse environment.
- **Reduce training costs.** The training time for new pickers is significantly reduced by the use of voice picking. Staff find it easier to learn from voice directed tasks as opposed to interpreting paper tasks meaning that training time can often be reduced by as much as half.
